

Task 1: Dear Alex! How is it going? Let me introduce about myself and my family. My family consists of 4 people: my parents, my 26-year-old brother and I am 20 years old. in my free time, i usually listen to k-pop music, watch some reallity programs (such as running man, asia's got talent . . .) and especially, i am keen on going shoping with my friends. And how about you? I am looking forward to receiving your letter! Best Regard!

Nga Task 2: Travel to and from the lunar surface has been known to be feasible since it was first achieved 34 years ago. Since that time there has been enormous progress in related engineering fields, so there are no fundamental technical problems facing the development of lunar tourism -- only investment and business problems. The outstanding near-term problem is to reduce the cost of launch to low Earth orbit, which has been famously described as "halfway to anywhere". Recently there has been major progress towards overturning the myth that launch costs are high because of inescapable physical limits, as companies are planning sub-orbital flights at 0.1% of the cost of Alan Shepard's similar flight in 1961. Market research shows strong demand for both sub-orbital flights and orbital services. Travel to the Moon will offer further unique attractions: in addition to its allure arising from millennia of mythology in every country, bird-like flying sports will surely become a powerful demand factor. So i think in the future the holiday on the moon will be feasible
