

Task1: Dear Paul, Thanks for your replying. I will take a train to visit you. I think when I go on train I can draw some nice pictures for you, you may remember me when we can't meet. They are little things that never disappear with the time. I miss you really much so I want to have time with you as much as I can and meet you as fast as I can, you know? I will see you at 8p.m. Can you pick up me at the train station? I think we will have an active night! How about getting the horse - race by the river and camping? I want to try it with you! I'm looking forward to seeing you, babe! Love, Hue

Task 2: I agree that "The best thing about today's films is the special effects". Effects affect the quality of the film so much. The first reason I make me agree with the opinion because the meaning of the effect on the action film. Let's see! If the director has a good idea but the effect can't do, we will never know how the fewer meanings of the film is. The effects will help them show the details in a magical way like they want. An example, you can still find Paul Walker in the film "Fast and Furious 7" despite of his death. They want to share the sorrow with his family, his friend actors and his fans. Paul will never die, he's still here, still in our mind like Vin Diesel says "I don't have a friend, I have a family", like the film's song "See you again", in other sky, in other way. The second, the special effects will bring you the strong feelings, strong emotion that you will find hard to have in the other way. The 3D effects make the scene more and more real, let the audience feel like living in the place they see in the screen. They live more with the story, feel more with the actor so they will have the memorable times. So at the end, I just want to say that I don't know what's happen if the film, special action films don't have the special effects, maybe so boring and so poor. The special effects is not the heart of the film but the film will be less attractive without the special effects! Please believe that "The best thing about today's films is the special effects".
