

Task 1: Dear Chris, I had an important meeting so I couldn't come to your party last night. I felt so sorry about that. I am so pleasant to meet you on Saturday. We can go to the cinema and see an interesting movie together. Then I would like to have a traditional meal for lunch. How about going shopping in the afternoon? What do you think? I am arriving at 9.30. We can meet outside the station. Love Ngoc

Task 2: We must all look after the planet where we are living and every human activity takes place within living. The first reason for care about the environment is a clean environment is essential for healthy living. The more we don't look after the environment, the more it will be polluted with contaminants and toxins that have a harmful impact on our health. For example, air pollution can cause respiratory diseases and cancer, among other problems and diseases, due to the inhalation of all the harmful chemicals. Water pollution can lead to typhoid, diarrheal diseases, and other waterborne/water-related diseases, due to the intake of bacteria and parasites. The second is the earth is warming causing the greenhouse effect. Next, our great-great and great-great-great grandchildren will appreciate it. The fourth is the biodiversity is important. Biodiversity refers to the variety of plants, animals, and other living things in our world. It can be negatively influenced by habitat loss and degradation due to human activity, climate change, and pollution, among other things. Finally, the earth is our home. The most common way is the 3 R's: reduce, reuse and recycle. One person can start a movement that could possibly lead to a major environmental breakthrough.
