

Task 1: Dear Chris Last night, i had some problems with my neck. It was hurt. So, I couldn't go to the party. It was a pity. And I would like to meet you on Saturday. I think we can have some drinks and go for a walk. Your Best friend

Task 2: Our planet, Earth, is the home for not only humans but also for the living and non-living things that make people alive. But people are destroying their life by polluting environment, endangering other species, For example, the concentration of CO2 which causes greenhouse effect is increasing every day. Many bad effects from greenhouse are flooding, drought, tsunami, storm, unexpected weather condition and temperature increasing which causes ice melting in two poles. It affects to everyone, not just someone. Therefore, Everyone has to look after the planet. It is not just someone's responsibility. It is every human's responsibility. We can look after our planet by daily activity, no need to do extraordinary things. It comes from small actions such as: garbage classification, 3R(Reduce- Reuse- Recycle), using alternative energy sources, turning off lights if not necessary. Every one can contribute a little thing to save the earth. From these little things, Earth can be saved. It is more green, no more storm, unexpected weather conditions.
