Task 2 The moon and space will be popular places to go on holiday in the future. I don't think so although there is very great. Scientists at the University of Tennessee (USA ) said that the Moon's surface is covered by a thick layer of dust -like volcanic ash and asbestos on Earth . The dust is easily inhaled and can increase the risk of developing various types of cancer . Besides, if people can be on the moon and the universe will expand human knowledge and they can explore more about other spaces. That would be a very interesting thing if humans to the moon and space to vacation in the future.
