

Task1: Hi Alex, nice to meet you. I'm Trang, your penfriend. I'm 18 years old and I'm studying in Hanoi Metropolitan University now. I have a younger sisters, she is 12. She is a student at Nghia Tan Secondary School. We are very close. In my free time, I like to read comic book, ride a bike around the lake at the park. sometime I like to stay at home, listening music, play video game with my friends. How about you? What do you like to do in your free time? Trang

Task2: Nowadays, when technology and our demands are increasing rapidly, the moon and space will be a new place to go on holliday. In the future, in my opinion, we lill not have to wait a long time to relax on the moon. In the first place, we can go to the moon and space easily because of technology increasing. In the past, after Neil Amstrong took a first step on the moon, we could belive that people could be out of the place. Nowadays, when tachnology is going up rapidly, we have more chances to fly out to discover an universal. We can produce some spaces with hightech to pick up more people. Moreover, with more and more reseach projects, people can stay on out of space. For example, they do a fproject to chooce the people to live on the Mars and will not be back to the Earth. In brief, we can visit to the space with supporting high technology. In the second place, the people have more demands. We always want to discover somethings new and the Earth is smaller than the Universal, so it's not enough to people to explore. When we have more money with better live condition, we can travel more and more, so it's run out of place to visit quickly. For example, Lady Gaga who is a singer want to hold a concert out of space. It is a new way to draw attraction. In conclusion, the more demands people have, the more chances people visit the moon and space. At last, if we have a dream and hightech, a holliday on the moon and space will be soon we can belive totally because we used to do.
